**SURGEON GENERAL'S WARNING: Cigarette
Smoke Causes Cancer, May Complicate
Pregnancy.**

1. Cigarettes are the leading cause of preventable death and disability in the United States. Smoking causes lung cancer, heart disease, and emphysema. It also causes complications during pregnancy, including low birth weight, stillbirth, and premature delivery. Quitting now greatly reduces serious risks to your health. For more information, call 1-877-448-8789 or visit us online at www.fda.gov/tobacco.
2. The FTC method of measuring the tar and nicotine content of cigarettes is based on a machine that simulates a "light" or "hard" draw. This method does not reflect the actual tar and nicotine content of a cigarette as smoked by an individual. The actual tar and nicotine content of a cigarette as smoked by an individual may be higher or lower than the FTC method measurement. For more information, call 1-877-448-8789 or visit us online at www.fda.gov/tobacco.
